Dynamic Application *Forms*

DESIGN CONCEPT 1

Concept

Adoption forms customized to each applicant's experience level, determined through a short pre-application quiz.

Design Focus

To create a more intuitive and relevant application experience for potential adoptees.

Scenario: Claire has kept rabbits in the past and she's looking to adopt.

1

Claire looks at the VRRA website and finds the tab for the adoption form.

"How do I apply to adopt?"

2

A popup asks her if she is looking to adopt and/or foster, and asks her for her level of experience keeping rabbits

"I used to keep rabbits, so I guess I have some experience."

3

Claire fills out a form specific to her needs.

"Wow that was much shorter than before."

Application Priority *Dashboard*

DESIGN CONCEPT 2

Concept

A dashboard for the VRRA adoption team to quickly view applications, see the coordinator assigned to each, and track their priority status.

Design Focus

Help the adoption team work more efficiently by giving them a single place to view applications and track their status.

1

Samantha sees and selects an application that has yet to be reviewed, indicated by "Not Reviewed" status.

"Wow there are so many applicants"

Scenario: As a new VRRA coordinator, Samantha struggled to keep track of adoption applications- those pending, completed, or awaiting follow-up; the application priority dashboard makes it easy to organize them all.

2

The applicant has a few qualities that potentially disqualify them from adopting. Sam marks the application with two flags accordingly to notify other coordinators.

"I should flag these so the other can see it"

3

In the menu that displays no assigned coordinators, she assigns herself to indicate that the application is taken.

4

Samantha logs on to the dashboard and is presented with all the applications in progress.

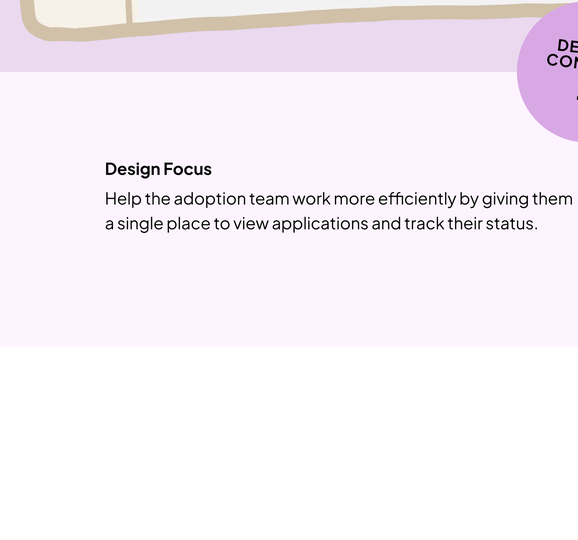
"Time to do some applications."

5

After flagging the application and tagging the reasonings, she sets the application urgency to "high," for other coordinators to take a look.

"This might need a second opinion."

Integrated Adoption *Profile*



DESIGN CONCEPT 3

Concept

Integrating the application form with the annotated notes and interview reports from the adoption coordinator so volunteers can make faster, more informed decisions based on centralized information.

Design Focus

Helps the adoption team note and remember details of applications while preparing for interviews or evaluating applicants.

Scenario: Samantha is a new VRRA volunteer and is using the new Integrated Adoption Profile.

1

Sam looks through the VRRA google forms and sees a newly filled application form.

"Is this applicant qualified?"

2

She scans the application, annotating any obvious concerns or red flags.

"What qualities are they missing and are they willing to learn/ improve?"

3

She schedules an interview with the applicant.

"How long will it take for them to respond?"

4

After the interview, Sam gathers her notes and the forms, compiling it into an adoption profile.

"What they say seems to match up with the application"

5

The adoption profile is sent to VRRA members to review.

"What do other members have to say about this applicant? The directors have the final say."

6

Decision to accept or deny
